TLI Software is a 5 year old company based in Toronto, Canada and Bangalore, India. We are an ISO 9001:2000 Certified Software & Web Development, BPO and Consulting Company.

TLI Software has engaged successfully with clients in verticals as diverse as automotive, electronics, telecom, health management, interactive advertising and media, banking and finance, transport and logistics, legal, education and manufacturing. Our cross-functional domain expertise and end-to-end process knowledge ensures that your requirements are understood and delivered to your satisfaction. Our domain and technology expertise is built on engagement processes that seek to deliver the benefits of outsourcing smoothly and effectively to your business.

At TLI Software, our solutions and software products are a result of pre-defined processes and methodology. As a client, we ensure that you are an integral part of the whole process at every stage. To put it simply, there are no surprises for you at any stage of our engagement with you. We believe timely delivery is a consequence of good processes. TLI has dedicated account managers who adopt best-of-breed practices and a rigorous methodology to achieve this end. A world-class resource pool spread over continents gives us the ability to manage diverse accounts across continents. Additionally, we believe in allocating dedicated people for each client. These resources are hand picked from our pool of talent and will have the appropriate skills to contribute effectively in each project. Our global delivery and support model ensures that clients have access to our project management team 24/7/365.

Some More Facts about TLI:

- a) We can provide comprehensive range of **Software & IT Solutions, including packaged applications, Enterprise-level applications, Web Designing and development, Billing Solution, Content Management System, E-Commerce, Portal Development, Social Networking, Retail Point-of-Sale (POS) Software Applications, Web Promotion, and IT staffing and staff augmentation solutions** to name a few.

- b) We have our most expertise on the development platforms like **OpenSource platforms, Microsoft development platforms, Java based platforms, Web Management, Oracle, Dynamic Flash, Flex, etc., and also Web Designing, Graphic Designing, Graphics & Multimedia, SEO and much more.** Interactive web sites and application development is a major focus for staff. We specialize in Database driven Web Applications requiring the ability to interface with legacy systems.

Please review the below document for a complete list of our skill-sets.

- c) TLI prides itself on building applications that are scalable and can be rolled out to additional sites or locations as needed. All of our applications are available as a managed service or to be implemented on our client's servers and networks.

- d) Part of our methodology is to create a scope of work and assign a Project Manager and Business Analyst to every assignment, no matter how large or small. We work hard at effective communication; TLI employees and all programmers, giving us complete oversight for our work. Clear and regular communication is critical for producing work as specified and on budget. One of the most important components is Project Management. The Project Manager will be responsible for technical communication in all phases. Additionally the Business Analyst will participate for the life of the project. We are always sensitive to the needs of your business and available for discussion at all times.

How we can work with you?

In a nutshell, we can work with your company in two ways:

- **Project Basis:** We provide a scope of work for individual projects and quote on a project by project basis.

- **Dedicated Resource:** We can provide full-time resources who will work exclusively for you remotely or onsite or we can hire and manage a full or part time developer(s) to provide services for a **Monthly Fee**. A great advantage of this mode is that if you have multiple requirements, these remote hires can be used in multiple projects simultaneously without compromising on the quality of the output.

We are comfortable working in either fashion and depending on your needs will consult with you to determine which is the most cost effective and productive for you.

Our Rates (For Development):

- Project to project basis : \$19 – \$23 per hour
- Offshore Full time resource: \$2200 – \$2600 (Monthly charges for a developer)

Quality Management

Our quality management is in accordance with ISO 9001:2000 standards.

TLI Software believes in methodology based web application development to create an application which meets your expectations. The process helps TLI minimize potential bugs and security concerns. Phases in the life cycle of a web application development are:

- Requirements gathering and analysis
- Outlining and definition of the solution architecture
- Documentation and prototype development
- Software design using formal design methods
- Application development
- Validation against business requirements
- Quality check
- Roll out to production

Project Management

We are ISO 9001:2000 certified and strictly follow ISO requirements for all processes.

TLI utilizes online project management software for tracking changes and updates. RS will be invited to log into the system at the launch of the project and will receive all updates as they happen. Our staff is also available for online and telephone conversations as needed.

As TLI develops the application, we will be assembling the operation manual. At completion and roll out.

TLI backs up all work daily and stores backups off site.

Web Applications & Websites Delivered By TLI Software Inc.

Below are a few samples of works executed at TLI Software:

1) SMS Based Enterprise Product:

SMS Based Enterprise Product using following technologies:

- JBoss Application Server
- Seam Framework
- RichFaces JSF Ajax Framework
- Java SMPP API
- Java Message Service
- Oracle and MySQL Database.

The first version of this enterprise SMS product leverages the strength of "Short Message Service" in building end-to-end enterprise solutions. It supports both push and pull messaging. This product is based on priority queues (implementation of JMS), that enable SMS to have priority and assured delivery.

The admin panel of this application is developed in Seam with JBoss and database used was oracle. This application is a perfect amalgamation of Web 2.0 with java.

2) Mobile Banking

Mobile Banking Product using following technologies:

- JBoss Application Server
- J2ME client for Symbian phones.
- Struts Framework
- Web Services Integration with the Core Banking.
- Java SMPP API
- Java Message Service
- Java COMM API
- Oracle and MySQL Database.

3) Mobile Time Tracker

Mobile Time Tracker Product using following technologies:

- Apache Web Server
- J2ME client of Symbian phones.
- Blackberry Version for Smart BB phone.
- Oracle and MySQL Database.

This application tracks the time spent by the user while roaming.

The admin panel facilitates administrators to fetch reports based on users and time spent by various users on certain stuff while roaming.

4) Blackberry Game

This game is developed using the low level API of BB.

This is still in progress so, we cannot disclose the working & features of the game due to NDA.
